PROFILE SUMMARY

Frontend Engineer with 2+ years of building production React applications across healthcare, e-commerce, and AI-powered domains. Experienced integrating AI APIs (OpenAI, Gemini, Hugging Face) and delivering real-time web features using WebSocket. Currently deepening expertise in RAG systems and AI-assisted development workflows. Seeking a frontend or full-stack role where modern web and AI intersect.

WORK EXPERIENCES

UST Global (M) Sdn. Bhd. | April 2024 – September 2025

Software Engineer II

- Led frontend development of an AI-powered sports management web application using React.js, demonstrating AI's capabilities to accelerate feature delivery within agile sprints.
- Built the complete frontend of an AI virtual try-on fashion app (React.js + WebSocket), integrating a computer vision backend that renders AI-generated outfit previews in real time.
- Implemented AI-powered features via Hugging Face, Google Gemini and OpenAI APIs, expanding the product's intelligent capabilities.
- Wrote unit and end-to-end tests (Playwright) on an Angular enterprise application, improving test coverage and release confidence.
- Delivered responsive, cross-browser SPAs using React.js, Context API, and Shadcn UI within Scrum/Agile workflows.

Polaris Aura Sdn. Bhd. | July 2023 – April 2024

Junior JavaScript Developer

- Built and maintained frontend for a healthcare platform serving one of Malaysia's major hospital networks, enabling users to purchase health packages and book doctor appointments online.
- Improved page load performance through code splitting and lazy loading, reducing initial bundle size.
- Developed reusable React component systems with Material UI and Bootstrap, ensuring design consistency across the platform.
- Integrated RESTful APIs to deliver dynamic content including appointment availability and package listings.
- Facilitated client stand-ups and translated evolving business requirements into technical deliverables.

PROJECTS

Local RAG Agent | Python, LangChain, Ollama, ChromaDB, Llama 3.2

Built a local retrieval-augmented generation agent for private document Q&A – zero cloud dependency, fully offline

Cover Letter GPT | Next.js, TypeScript, OpenAI API, Supabase, Stripe

AI-powered web app that generates tailored cover letters from resume uploads and job descriptions – integrated OpenAI API for context-aware generation, Stripe for payment flow and Supabase for auth and data persistence.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

UI: Tailwind CSS, Material UI, Bootstrap, Ant Design, Shadcn UI

State: Context API, Redux Toolkit

Testing: Playwright, unit testing

Backend & API: Node.js, Express.js, RESTful APIs, WebSocket

Database: PostgreSQL, Supabase, MongoDB

Tools: Git, GitHub, Vite, Postman, Chrome DevTools, Vercel

AI & ML: OpenAI API, Google Gemini, Hugging Face, Ollama, LangChain, ChromaDB

EDUCATIONAL BACKGROUND

Universiti Teknologi PETRONAS (UTP) | September 2018 – May 2022

Bachelor of Computer Engineering (Hons)

Major: Scalable computing

CGPA: 3.44

LANGUAGES

Bahasa Melayu (Native)

English (Fluent)
